Pokedex App

Objective

To build a small web application with HTML, CSS, and JavaScript that loads data from an external API and enables the viewing of data points in detail.

User stories

As a user, I want to see a list of Pokemons as well as their details

User flow

- User visits the app homepage
- User is presented with a list of pokemons
- When user click on a pokemon name, a dialog including the detailed information of pokemon will pop up.
- User can switch between different pages of website

Key features

- The app should load data from external sources (a public API)
- The app should display a list of items
- When user clicks on an item, the app should display details for that item
